TEMPLATES

<template>

This is a HTML tag that is used to store the HTML code. The information inside this tag is invisible. To get the content from the template the user needs to use "java script" and get the content and publish it to the internet.

For example:

The heading<h1>, body will be visible until the users clicks the show hidden content

<template>

  <h2>Flower</h2>

  <img src="some image.jpg" width="214" height="204">

</template>

Website Template are used to create websites like Portfolio and templates for food, fashion etc...

IMAGE

This is also a basic tag in HTML.

<img> tag is used to attach or add the image in a web page.

It has 2 attributes:

Src = It shows the path of the image.

Alt = The alt attribute should show the image content, so users who cannot see the image, they will get an understanding of what the image contains.

PARAGRAPHS

This is also one of the basic tag in HTML.

<p> This is used to make the text known on the web pages. </p>

Paragraphs always starts with a new line and used to fragment the different information and improves the readability.

HEADINGS

In HTML, headings are used to define the structure and hierarchy of the content on a webpage.

There are six levels of headings, from **<h1> to <h6>**, where **<h1>** represents the **highest level** of importance and **<h6>** represents the **lowest**.

All the six heading tags has different roles:

For example, <h1> tag is used for the Main Title of the page. <h2> is used for the sub-Title and so on.

These headings will make the user to understand the content easily just by seeing the topic(heading).

ANCHOR

This Anchor tag is used to create hyperlink on a website page. This hyperlink is to link the current website with other webpage or with the same webpage of some other location.

This hyperlinking is possible with the help of <href> attribute (hypertext reference) which makes the normal text to hypertext.

TABLES

Tables are used to represent real life table data.

<tr> used to display table row.

<td> used to display table data.

<th> used to display table header.

BORDER attribute is used to show the border around the table.

VIDEO TAG

This tag is used to add video in your webpage.

`<video src="myVid.mp4"> My Video </video>`
